

SET OF MODULES TO ADAPT OUR SOLUTIONS TO CUSTOMER NEEDS

Modules

Our modules add new functionalities to our products according to each customer requirements. In this way, it is possible to offer customized solutions by integrating the most advanced facial recognition technology. Modules available for:

 **BioSurveillance**

 **BioMarketing**

 **BioAccess**

 **BioFinder**

BioMaster

CENTRALIZED MANAGEMENT

Application for connecting multiple local BioSurveillance or BioMarketing systems, allowing a centralized management.

BioGenerator

SYNTHETIC VIEW GENERATION

BioGenerator provides artificial rotations of an individual's face based on an initial image, thereby improving recognition efficiency.

BioCom

INTEGRATION WITH APPLICATIONS

The BioCom communications module facilitates the task of integrating our products with third-party applications.

BioAlarm

ALERTS ON MOBILE DEVICES

BioAlarm is an external visualization module that enables the remote reception of alarms on mobile devices.

BioDatabase

IMAGE IMPORTATION

BioDatabase is a management tool that facilitates the automatic incorporation of a large number of subjects into the database.

BioCompare

FORENSIC FACE ANALYSIS

BioCompare is the tool that finds a specific subject among all the alarms of an existing database.

BioRegister

SUPERVISED ENROLLMENT

BioRegister is a module for the enrollment of subjects in a supervised mode.

BioEnrollment

AUTOMATIC ENROLLMENT

BioEnrollment permits the user to incorporate into the database all the subjects who pass in front of a camera, automatically and without their collaboration.
